

Fiberplate® Stair Tread Covers

Fiberplate® stair tread covers are a convenient way to provide solid, slip resistant footing for existing treads that are still structurally sound. Stair tread covers may be installed over wood, concrete or metal steps.

Fiberplate® stair tread covers have an integral aluminum oxide grit top surface, reinforced with a woven glass mat for durability and impact resistance.

Fiberplate® stair tread covers can be ordered with a special phosphorescent coating for the nosing area, causing it to glow even after the primary light source has been removed. This special nosing is perfect in stairways which serve as emergency exits during power outages, outdoor access ways where lighting is periodically dimmed or as a safety measure for nighttime operation in outdoor applications.

Colors Available: Dark gray with yellow nosing or light gray with black nosing.

Standard Sizes: Stair Tread Covers come in 8", 9", 10", 11" and 12" depths. The standard thickness is 1/8". Also available are 1/4" thick covers for heavy-duty applications. Standard 12' panels are easily cut to size during installation, or are available precut to custom lengths.
